1. Overview & how the pieces fit together

The admin panel (admin.html) is where you manage everything about the shop — what's for sale, delivery options, and every order and customer that comes in. The storefront (index.html) is what your shoppers see; it is a static site, so nothing you do in the admin panel reaches shoppers until you either click a Publish button or the change is one of the handful that go live immediately (see section 7).

At a high level, a shopper's journey and your side of it look like this:

- A visitor lands on the storefront, optionally fills in the entry-gate welcome form, browses the collection, and adds items to their cart.
- They check out from the cart, choosing delivery or self-collection — this opens WhatsApp with the order pre-filled, and the order is also saved into your admin panel automatically.
- You see the order land on the Orders tab, send a Proforma Invoice from there, and the customer taps a link to accept it.
- You fulfil the order and move its status forward as it progresses — confirmed, booked, in transit, then delivered or collected.
- Everyone who has ordered or filled in the entry gate builds up in your Customers list, which you can export any time.

Note: Nothing about payments changes here — there is still no online payment gateway. Every order is still followed up and settled with the customer on WhatsApp, exactly as before; the admin panel just keeps a clean, organised record of it all.

2. Signing in

Since your admin account is already set up, you will only ever see the sign-in screen shown below, not the one-time account-creation screen. Signing in is two steps: your password, then a 6-digit code.

Prabhvas Fashions — Admin

[-- View live site](#)

Admin sign in

Enter your admin password to continue. You'll then be asked for a 6-digit verification code.

Password

Continue

Prabhvas Fashions admin · changes publish straight to your live site via GitHub.

The sign-in screen — enter your admin password.

Prabhvas Fashions — Admin

[-- View live site](#)

Verification code

Enter the code from your authenticator app.

6-digit code

Verify & Sign in

[-- Back](#)

Prabhvas Fashions admin · changes publish straight to your live site via GitHub.

Second step — enter the 6-digit code from your authenticator app (or emailed code, if you set that up).

1. Go to your admin.html address and enter your password.
2. Enter the current 6-digit code from your authenticator app.
3. You're in — the Dashboard loads.

Note: Five wrong attempts on either the password or the code locks that step for 5 minutes, as a basic brute-force protection. This resets on its own — just wait and try again.

3. The Dashboard

The Dashboard is your at-a-glance summary: total products, how many are actually live on the site, total SKUs (colour/size variants), how many are sold out, how many categories you have, how many reviews are waiting for your approval, and how many orders are new. The same numbers are echoed as small badges next to the relevant tab in the navigation bar (Reviews, Orders), so you can tell at a glance what needs attention without opening the Dashboard at all.

Dashboard — quick counts, plus a shortcut list of your products.

4. Categories

Categories organise your collection into the tabs shoppers see on the storefront. You can also nest one level of subcategories under a main category — useful if, say, you sell “Short Tops” in several prints and want “Frozo Print”, “Embroidery Neck” and “Rose Pattern” each as their own tab underneath.

Parent category
Sort order

e.g. Short Tops, or Frozo Print
None — top-level category
0

Leave "Parent category" as None for a main category (like "Short Tops"). Pick a parent to make this a subcategory (like "Frozo Print" under "Short Tops") — subcategories show as tabs on the live site.

Add category

All categories

NAME	PARENT	SORT	PRODUCTS
Default	None — top-level category	1	1

Add a category, and set its parent if it should be a subcategory.

1. Type the category name.
2. Leave **Parent category** as None for a main category, or choose an existing category to make this a subcategory of it.
3. Set a sort order if you want to control the tab order (lower numbers appear first).
4. Click **Add category**.

Leave "Parent category" as None for a main category (like "Short Tops"). Pick a parent to make this a subcategory (like "Frozo Print" under "Short Tops") — subcategories show as tabs on the live site.

Add category

All categories

NAME	PARENT	SORT	PRODUCTS
Default	None — top-level category	1	1

Existing categories — rename, reorder, or delete from this table.

Note: Deleting a category is blocked with a friendly message if it still has subcategories or products under it — move or remove those first. Subcategories can only go one level deep.

5. Products

The Products tab lists everything in your catalog, with Edit and Delete on each row.

Products list — click Edit on a row, or + Add Product to create a new one.

Adding or editing a product

1. Click + Add Product (or Edit on an existing one).
2. Choose its category — pick the most specific one available (a subcategory if the parent has any).
3. Fill in the product name, description, base price, and sort order.
4. Tick **Published** once you're ready for shoppers to see it — leave it unticked to keep working on a product without it appearing on the live site.
5. Add at least one row under **SKUs — colours & sizes**: a photo, a SKU code, colour, size, an optional price override, and the stock count. Use **+ Add another SKU** for each extra colour/size combination.
6. Click **Save to List**.

Unsaved changes — click Publish to make them live

Publish Changes

The new product now appears in the list.

Note: Saving a product only stages the change — it does not go live yet. You'll publish it from the global Publish Changes bar, covered in section 7.

6. Settings

The Settings tab is organised into individual cards — Site details, Hero banner photos, Delivery zones & pricing, Self-collection points, Delivery time slots, Customer capture, and your account security. This is the one part of the admin panel that does not use the global staged-then-Publish workflow: every card here has its own Save & Publish button, so each section goes live on its own, the moment you save it — see section 7 for exactly why this is designed this way.

6.1 Site details

Your site name, tagline, WhatsApp number, currency, contact email, and social links (Instagram, Facebook, TikTok, Snapchat, Moj — leave any blank to hide that icon in the footer).

Publish Changes

Hero banner photos card — one slot per photo, plus the rotation interval.

1. Upload a photo into any empty slot (or replace an existing one).
2. Set **Change photo every (seconds)** — this only matters once a second photo is added. It defaults to 10 seconds.
3. Click that card's **Save & Publish**.

The screenshot shows a web interface with a central white panel on a light beige background. At the top of the panel is a 'Choose' button. Below it is a section for 'Photo 5' with another 'Choose' button. This is followed by a section for 'Photo 6' with a 'Choose' button. Below these is a section titled 'Change photo every (seconds)' with a text input field containing the number '10'. A small note below the input field reads: 'Only matters once you've added more than one photo above.' Below this is a 'Save & Publish' button. A green success message bar at the bottom of this section reads: 'Saved and published — live within about a minute.' Below this is a section titled 'Delivery zones & pricing' with a sub-header 'Priced by area at checkout — this is the delivery charge customers see and pay.' and a dashed rectangular box for input. At the bottom of the page, outside the central panel, is a yellow warning message: 'Unsaved changes — click Publish to make them live' and a red 'Publish Changes' button.

Saved and published — the new photo and timing go live within about a minute.

6.3 Delivery zones & pricing

Add every area you deliver to, each with its own charge, an optional free-delivery threshold, and an available/unavailable toggle — handy for pausing an area temporarily without deleting it. Only zones marked Available are offered to shoppers.

Choose

Saved and published.

6.6 Customer capture (entry gate)

A single toggle controls whether every visitor must share their name and phone number (email and area optional) before they can browse the storefront at all. This is a deliberate trade-off — some casual visitors will leave rather than fill in a form — so it's entirely your call, and easy to switch off again later.

Add coordinates, or use "Use my current location" while standing there.

Saved and published — live within about a minute.

Change password

Current password

Unsaved changes — click Publish to make them live Publish Changes

Turned on and published — every new visitor will now see the welcome form.

Note: Whether or not the gate is on, every order still captures the customer's name and phone automatically — the gate is only for building a fuller list that includes people who browse but never order.

6.7 Account security

Further down the Settings tab you can change your password, regenerate or turn off your authenticator key, and set or remove the email used for emailed 2FA codes. These take effect immediately and do not use a Save & Publish button — there is nothing to “publish” about your own login.

7. Publishing — two different mechanisms

It's worth being clear about this, because the two work differently on purpose:

- **Products and Categories** still stage your changes first. Nothing goes live until you click the **Publish Changes** button at the bottom of the screen, which commits everything you've staged to your GitHub repo (and uploads any new photos) in one step. Your live site then updates within about a minute.
- **Settings** publishes card-by-card, immediately, the moment you click that card's own Save & Publish button — it does not wait for, or get bundled into, the global Publish Changes button. This

means you can, for example, turn the entry gate on right now without also needing your in-progress product edits to be ready to go live.

The screenshot shows a product configuration interface with three main sections:

- Delivery Windows:** A text box explains that windows are requested, not guaranteed. Below is a list with one entry "9am - 12pm" and a "Delete" button. There is an "+ Add time slot" button and a "Save & Publish" button. A green confirmation message states: "Saved and published — live within about a minute."
- Customer capture:** A section titled "Customer capture" with a description: "Require every visitor to share their name and phone number before they can browse the site — useful for building a customer list, but note that some casual visitors will leave rather than fill in a form first. Easy to switch off again any time." It includes a checked checkbox "Require visitor details before browsing (entry gate)" and a "Save & Publish" button. A green confirmation message states: "Saved and published — live within about a minute."
- Global Publish:** At the bottom, a status bar shows "No unsaved changes" and a "Publish Changes" button. Below this, a green confirmation message states: "Published. Your live site will update within about a minute — [check it here](#)."

The global Publish Changes button, used for Products & Categories — confirms once it's live.

Note: Reviews/feedback approvals and Orders status changes are a third category: both take effect immediately too, with no Publish step at all, because there's nothing to stage — approving a review or updating an order status is a one-way action with no draft state.

8. What a shopper actually sees

It helps to occasionally walk through the storefront the way a customer would, especially after making changes. Here's the shopping flow end to end.

The storefront home page — hero banner, logo, and the collection below.

Browsing & adding to cart

Every product card has a small “+” quick-add button — for a product with only one option in stock, this adds it straight to the cart. For a product with a real choice to make (colour, size), tapping the card opens Quick View instead.

Quick View — pick a variant and quantity, then Add to Cart.

Confirmation that the item was added, right inside Quick View.

The cart & checkout

The cart icon in the top navigation shows a live item count. Opening it lists every line with a running subtotal. If you've configured at least one delivery zone or collection size point in Settings, a delivery/self-collection step appears before checkout; otherwise checkout just asks for name and phone, as it always did.

The cart, with the delivery/self-collection step ready to fill in.

Message us on WhatsApp

Browse the Collection

A short personalised welcome after submitting, before the visitor continues into the site.

The gate remembers a visitor for the rest of that browser session (it reappears in a new tab or after a full browser restart), and a returning visitor is greeted by name with their phone pre-filled, so it only takes one tap to continue. Whatever name and phone a visitor gives here also pre-fills checkout later, so they're never asked twice.

9. Orders — the fulfilment process flow

Every delivery and self-collection order lands on the Orders tab automatically, with a badge on the tab showing how many are new. Each order card shows the customer's contact details, a thumbnail photo and description of every item ordered (handy for picking and packing), the delivery address and GPS pin or the chosen collection point, the requested date/slot, and the total. Every order also gets a short order number (#1, #2, #3...) so you and the customer can refer to the same order without reading out a long ID.

A new order, colour-coded amber and ready for you to action.

The status flow

Move an order forward by picking the next status from its dropdown — this is modelled on how a courier tracks a shipment, and takes effect immediately, no Publish needed:

New → Confirmed → Booked → In transit → Delivered / Collected (or Cancelled, at any point)

Each card is tinted by status at a glance — amber for new, blue while confirmed/booked/in transit, green once delivered or collected, red and faded if cancelled — so the whole list is scannable without reading every line.

Sending the Proforma Invoice

Each order card has a Send Proforma Invoice button. Clicking it builds a PDF invoice (itemised costing, delivery/collection details, total) and opens WhatsApp with a message to that customer, pre-filled with a

link to view/download the PDF and a second link they can tap to formally accept the order — you just hit Send in WhatsApp, the same hand-off pattern as everywhere else on the site.

Confirmation that WhatsApp opened with the invoice ready to send.

Send this from whichever device/browser has your shop's WhatsApp signed in, since that's what makes it go out through your business number.

The customer's accept link

When the customer taps the accept link from their invoice message, they land on a simple confirmation page — no account or app needed on their side.

What the customer sees after tapping Accept.

Back in your admin panel, that order automatically gets a green “✓ Accepted” badge and moves from New to Confirmed on its own — you don't need to ask the customer to reply and update it yourself.

The order after the customer has accepted — badge shown, status advanced automatically.

Note: Orders are not published to your public GitHub repo like Products and Categories are — they're kept privately in your Worker's storage, since they contain customer names, phone numbers, and addresses.

10. Customers

Every order already captures a name and phone number, but the Customers tab builds a fuller list of everyone captured this way — including anyone who filled in the entry gate but never ordered. Records are deduplicated by phone number (with or without a leading 0, with or without the UAE country code all resolve to the same person), so nobody appears twice — repeat visits or repeat orders just bump their visit count and last-seen date instead.

The screenshot shows the 'Prabhvas Fashions — Admin' dashboard. The 'Customers' tab is selected in the top navigation bar. Below the navigation bar, there's a 'Customers' section with a description: 'Everyone who has submitted the site's entry-gate form or placed an order, deduplicated by phone number. This list only grows once you turn on "Require visitor details before browsing" on the Settings tab, or once orders start coming in.' Below this description is a table with columns: NAME, PHONE, EMAIL, AREA, VISITS, FIRST SEEN, and LAST SEEN. The table contains two rows of data. Above the table are three buttons: 'Refresh', 'Export CSV', and 'Import from past orders', followed by a count '2 customers'. At the bottom of the dashboard, there's a 'Publish Changes' button and a status message 'No unsaved changes'.

NAME	PHONE	EMAIL	AREA	VISITS	FIRST SEEN	LAST SEEN
Layla H.	0521234567	layla@example.com	Jumeirah	1	2026-08-25	2026-08-25
Fatima R.	0501234567		Dubai	1	2026-08-25	2026-08-25

The Customers list, with Refresh, Export CSV, and Import from past orders.

- **Refresh** pulls the latest list.
- **Export CSV** downloads it as a spreadsheet you can import into WhatsApp Business, Mailchimp, or wherever else you run outreach from.
- **Import from past orders** is a one-time backfill for orders placed before this list existed — it only adds people not already on the list, and never touches an existing person's visit count, so it's safe to click more than once.

Note: Like Orders, the Customers list is kept privately in your Worker's storage — it is not published to your public GitHub repo.

11. Reviews & feedback

Shoppers can leave a star rating and review on any product, and separately can leave general feedback about the shop as a whole (not tied to a product) via the Feedback link in the navigation. Neither appears on the live site immediately — both land in your Reviews tab first, with a badge showing how many are waiting.

The screenshot shows the Prabhas Fashions website with a modal for submitting a product review. The modal is titled "Reviews" and is for the product "Pleated Wide-Leg Palazzo". It states "No reviews yet — be the first to share your experience." and includes a "Write a Review" section with a 5-star rating system. The user has entered the name "Aisha K.", an email address, a phone number, and the review text "Beautiful fabric, true to size!". A "Submit Review" button is at the bottom of the modal. The background shows the website's navigation bar with links like "Collection", "Shipping & Payment", "Contact Us", "Feedback", and "Order on WhatsApp". The footer contains information about delivery, payment, and ordering.

Reviews

Pleated Wide-Leg Palazzo

No reviews yet — be the first to share your experience.

Write a Review

★★★★★

Aisha K.

Email (optional) Phone (optional)

Beautiful fabric, true to size!

Submit Review

DELIVERY Across the UAE **PAYMENT** Pay Your Way **ORDERING** Simple as a Message

A shopper submitting a product review — name required, email/phone optional and never shown publicly.

Pending reviews, waiting for your decision.

1. Open the **Reviews** tab.
2. Click **Approve** to publish a review to the live site immediately (no Publish step needed), or **Reject** to discard it.

Note: You can also delete an already-published review later from the same tab if you ever need to. General feedback goes through the exact same Approve/Reject flow, labelled “General feedback (not product-specific)”.

12. Quick-reference cheat sheet

Goes live immediately — no Publish needed

Stages first — needs the global Publish Changes button

Typical daily routine

1. Check the Orders tab (and its badge) for anything new — action or send invoices as needed.
2. Check the Reviews tab (and its badge) and approve or reject anything waiting.
3. Make any catalog changes (Products/Categories), then click Publish Changes once at the end.
4. Check the Customers tab occasionally, and export a CSV when you want to run outreach.

That covers the full day-to-day workflow — from a first-time visitor through to a fulfilled order. If anything here doesn't match what you're seeing on screen, it likely means a newer update has landed since this guide was written.
